Restriction Requirement

Restriction to one of the following inventions is required under 35 USC 121:

- I. Claims 1-17 drawn to a method for estimating an operating parameter classified in Class 60, subclass 772, and
- II. Claims 18-24 drawn to an apparatus for estimating an operating parameter classified in Class 60, subclass 39.281.

The inventions of Groups I and II above are distinct because the method of Group I could be performed with apparatus materially different than that of Group II. The Group I method, for example, does not necessarily have to be used in conjunction with a gas turbine fuel controller as specified in the Group II apparatus. The method could be used in conjunction with alternative control devices, such as an air flow controller, or it could be used simply to monitor engine operation and without a control device.

Because these inventions are distinct for the reasons given above and require separate classification and/or divergent fields of search, restriction for examination purposes as indicated is proper.

Applicant is advised that even in the event that the restriction requirement is traversed, the response to this requirement to be complete must include an election of the invention to be examined. (The undersigned was unable to make contact with
